Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AB073146
LOCUS

DEFINITION Homo sapiens mRNA for CLCP1, complete cds.
ACCESSION AB073146
VERSION AB073146.1 GI:20330503
KEYWORDS
SOURCE Homo sapiens lung cell_line:normal lung tissue cDNA to mRNA.
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 Koshikawa,K., Osada,H., Kozaki,K., Konishi,H., Masuda,A.,
Tatsumatsu,Y., Mitsudomi,T., Nakao,A. and Takahashi,T.
Significant up-regulation of a novel gene, CLCP1, in a highly
metastatic lung cancer subline as well as in lung cancers in vivo
Oncogene (2002) In press
2 (bases 1 to 6093)
Koshikawa,K., Konishi,H., Osada,H. and Takahashi,T.
Direct Submission
Submitted (16-OCT-2001) Takashi Takahashi, Aichi Cancer Center
Research Institute, Division of Molecular Oncology; Chikusa-Ku,
Kanokoden 1-1, Nagoya, Aichi 464-8681, Japan
(E-mail:takahachi-cc.jp, Tel:81-52-764-2993, Fax:81-52-764-2993)

Sequence 24, Application US/08936135
Patent No. 6054293

GENERAL INFORMATION:
APPLICANT: Tessier-Lavigne, Marc
APPLICANT: He, Zhigang
APPLICANT: Chen, Hang
TITLE OF INVENTION: Semaphorin Receptors
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSEE: SCIENCE & TECHNOLOGY LAW GROUP
STREET: 75 DENISE DRIVE
CITY: HILLSBOROUGH
STATE: CALIFORNIA
COUNTRY: USA
ZIP: 94010
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/936,135

```

; FILING DATE:

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX Factor 8 homolog polypeptides and nucleic acids encoding them for
XX treating coagulation related disorders such as hemophilia and stroke
XX Claim 3; Page 64-66; 68pp; English.
XX The present sequence is a human Factor 8 homologue (F8H),
XX a coagulation cofactor which is selectively expressed in
XX haematopoietic, heart and reproductive tissues. It has haemostatic and
XX cerebroprotective activities. The F8H contains a Factor 5/8 signature
XX and is useful as a therapeutic for treating coagulation related diseases
XX such as haemophilia and stroke. The nucleic acid is useful as
XX hybridisation probe and amplification primer for detecting deficiencies
XX in the level of F8H mRNA, for screening F8H gene mutations and for
XX monitoring regulation of gene expression. Fragments of the nucleic acid
XX are also useful as diagnostic probes and primers, and can be used in
XX screening methods such as those using DNA chips. The present sequence is
XX also useful as a target to screen therapeutically useful modulators
XX of the F8H.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020160384A1
GENERAL INFORMATION:
APPLICANT: Ashkenazi, Avi J.
APPLICANT: Baker, Kevin P.
APPLICANT: Botstein, David
APPLICANT: Desnoyers, Luc
APPLICANT: Eaton, Dan L.
APPLICANT: Ferrara, Napoleone
APPLICANT: Fong, Sherman
APPLICANT: Gerber, Hanspeter
APPLICANT: Gerritsen, Mary E.
APPLICANT: Goddard, Audrey
APPLICANT: Godowski, Paul J.
APPLICANT: Grimaldi, J. Christopher
APPLICANT: Gurney, Austin L.
APPLICANT: Kljavin, Ivar J.
APPLICANT: Napier, Mary A.
APPLICANT: Pan, James
APPLICANT: Paoni, Nicholas F.
APPLICANT: Roy, Margaret Ann
APPLICANT: Stewart, Timothy A.
APPLICANT: Tumas, Daniel
APPLICANT: Watanabe, Colin K.
APPLICANT: Williams, P. Mickey
APPLICANT: Wood, William I.
APPLICANT: Zhang, Zemin
TITLE OF INVENTION: Secreted and Transmembrane Polypeptides and Nucleic
FILE REFERENCE: P2730P1C20

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 RT "Neuropilin-2, a novel member of the neuropilin family, is a high
 affinity receptor for the semaphorins Sema E and Sema IV but not Sema
 III";
 RT Neuron 19:547-559(1997).
 RL
 CC -!- FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORINS 3C, 3F, VEGF-165
 AND VEGF-145 ISOFORMS OF VEGF, AND THE PLGF-2 ISOFORM OF PGF.
 CC -!- SUBUNIT: NEUROFILIN-2 PROBABLY FORMS AN HETEROMERIC COMPLEX WITH
 NEUROFILIN-1 IN ORDER TO BE A FUNCTIONAL SEMAPHORIN E RECEPTOR.
 CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
 CC -!- ALTERNATIVE PRODUCTS: 6 ISOFORMS; A22 (SHOWN HERE), A0, A5, A17,
 B0 AND B5; ARE PRODUCED BY ALTERNATIVE SPLICING.
 CC -!- TISSUE SPECIFICITY: EXPRESSED IN DEVELOPING CNS, PNS AND IN SOME
 NONNEURAL TISSUES INCLUDING LIMB BUDS, DEVELOPING BONES, MUSCLES,
 INTESTINAL EPITHELIUM, KIDNEY, LUNG AND SUBMANDIBULAR GLAND.
 CC -!- DEVELOPMENTAL STAGE: THE EXPRESSION PATTERN IS VERY DYNAMIC AND
 IS DEVELOPMENTALLY REGULATED.
 CC -!- SIMILARITY: BELONGS TO THE NEUROFILIN FAMILY.
 CC -!- SIMILARITY: CONTAINS 2 CUB DOMAINS.
 CC -!- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
 CC -!- SIMILARITY: CONTAINS 1 NAM DOMAIN.

RX MEDLINE=20309748; PubMed=10748121;
RA Gluzman-Poltorak Z., Cohen T., Herzog Y., Neufeld G.;
RT "Neuropilin-2 and neuropilin-1 are receptors for the 165-amino acid form of vascular endothelial growth factor (VEGF) and of placenta growth factor-2, but only neuropilin-2 functions as a receptor for the 145-amino acid form of VEGF".
RL J. Biol. Chem. 275:18040-18045(2000).
CC -1- FUNCTION: THE MEMBRANE-BOUND ISOFORM IS A RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS. IT BINDS TO SEMAPHORIN 3A, THE PLGF-2 ISOFORM OF PGF, THE VEGF-165 ISOFORM OF VEGF AND VEGF-B. COEXPRESSION WITH KDR RESULTS IN INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS. IT MAY REGULATE VEGF-INDUCED ANGIOGENESIS.
CC -1- FUNCTION: THE SOLUBLE/SNRP1 ISOFORM BINDS VEGF-165 AND APPEARS TO INHIBIT ITS BINDING TO CELLS. IT MAY ALSO INDUCE APOPTOSIS BY SEQUESTERING VEGF-165. MAY BIND AS WELL VARIOUS MEMBERS OF THE SEMAPHORIN FAMILY. ITS EXPRESSION HAS AN AVERSE EFFECT ON BLOOD VESSEL NUMBER AND INTEGRITY.
CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. THE SOLUBLE/SNRP1 ISOFORM IS SECRETED.
CC -1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; MEMBRANE-BOUND (SHOWN HERE) AND SOLUBLE/SNRP1; ARE PRODUCED BY ALTERNATIVE SPLICING.
CC -1- TISSUE SPECIFICITY: THE EXPRESSION OF MEMBRANE-BOUND AND SOLUBLE/SNRP1 ISOFORMS DOES NOT SEEM TO OVERLAP. THE MEMBRANE-BOUND ISOFORM IS EXPRESSED BY THE BLOOD VESSELS OF DIFFERENT TISSUES. IN THE DEVELOPING EMBRYO IT IS FOUND PREDOMINANTLY IN THE NERVOUS SYSTEM. IN ADULT TISSUES, IT IS HIGHLY EXPRESSED IN HEART AND PLACENTA; MODERATELY IN LUNG, LIVER, SKELETAL MUSCLE, KIDNEY

CC	AND PANCREAS; AND LOW IN ADULT BRAIN. THE SOLUBLE/SNRP1 ISOFORM IS
CC	FOUND IN LIVER HEPATOCYTES, KIDNEY DISTAL AND PROXIMAL TUBULES.
CC	-1- SIMILARITY: BELONGS TO THE NEUROPILIN FAMILY.
CC	-1- SIMILARITY: CONTAINS 2 CUB DOMAINS.
CC	-1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC	-1- SIMILARITY: CONTAINS 1 MAM DOMAIN.

CC -1- FUNCTION: PROBABLY ASSOCIATES WITH PHOSPHOLIPIDS ON THE SURFACE OF
CC NANNARY EPITHELIAL CELLS AND MILK FAT GLOBULES. ZONA PELLUCIDA-
CC BINDING PROTEIN.
CC -1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A
CC SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING. THE SHORT FORM
CC LACKS 53 AMINO ACIDS WITHIN THE F578 TYPE C 1 DOMAIN.
CC -1- TISSUE SPECIFICITY: MILK AND SPERMATOZOAN.
CC -1- PTM: THE 2 O-LINKED GLYCANS CONSIST OF GAL, GLCNAC AND FUC, WITH
CC PROBABLY FUC AS REDUCING TERMINAL SUGAR.
CC -1- SIMILARITY: CONTAINS 2 EGF-LIKE DOMAINS.
CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.

 CC -1- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
 WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
 CC -1- SUBUNIT: Factor Va is composed of a heavy chain and a light
 chain, noncovalently bound. The interaction between the two chains
 is calcium-dependent.
 CC -1- DOMAIN: DOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA
 REPEATS.
 CC -1- PTM: Thrombin activates factor V proteolytically to the active
 cofactor, factor Va (formation of a heavy chain at the N-
 terminus and a light chain at the C-terminus).
 CC -1- PTM: SULFATION IS REQUIRED FOR EFFICIENT THROMBIN CLEAVAGE AND
 ACTIVATION AND FOR FULL PROCOAGULANT ACTIVITY.
 CC -1- DISEASE: OMEN PARAHOMOPHILIA, AN HEMORRHAGIC DIATHESIS, IS DUE
 TO A DEFICIENCY OF FACTOR V. OTHER DEFECTS IN F5 RESULTS IN A
 FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APCR
 MUTATION IS FOUND IN ABOUT 5% OF THE POPULATION WHICH SUGGEST THAT
 A SLIGHT THROMBOTIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL
 IMPLANTATION.
 CC -1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
 2 PLASTOCYANIN-LIKE REPEATS.
 CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
 CC -1- SIMILARITY: STRONG TO COAGULATION FACTOR VIII.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -1- FUNCTION: May be a transporter. May act as a non-selective
CC neuronal cation channel.
CC -1- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
CC -1- TISSUE SPECIFICITY: Expressed in the brain, with highest levels
CC found in the amygdala, nucleus caudatus, thalamus and hippocampus.
CC -1- DISEASE: Defects in MLC1 are a cause of megalencephalic
CC leukoencephalopathy with subcortical cysts (MLC). MLC is an
CC autosomal recessive disorder characterized by macrocephaly,
CC deterioration of motor functions with ataxia, and spasticity,
CC eventuating in mental decline. The brain appears swollen on
CC magnetic resonance imaging, with diffuse white-matter
CC abnormalities and the invariable presence of subcortical cysts.
CC -1- DISEASE: Defects in MLC1 are a cause of periodic catatonias (PC), a
CC familial subtype of catatonic schizophrenia which is a genetically
CC heterogeneous disorder characterized by psychosis and psychomotor
CC disturbances.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 CC -1- FUNCTION: Cleaves beta-linked terminal galactosyl residues from
 CC gangliosides, glycoproteins, and glycosaminoglycans.
 CC -1- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing beta-D-
 CC galactose residues in beta-D-galactosides.
 CC -1- SUBCELLULAR LOCATION: Lysosomal.
 CC -1- ALTERNATIVE PRODUCTS: 2 isoforms: 1 (shown here) and 2/Beta-
 CC galactosidase-related protein (AC P16279); are produced by
 CC alternative splicing.
 CC -1- DISEASE: Defects in GLB1 are the cause of GM1-gangliosidosis, an
 CC autosomal recessive disorder with three major clinical phenotypes
 CC that are distinguished according to the age of onset and severity
 CC of symptoms: infantile (type I), juvenile (type II) and adult
 CC (type III). The infantile form is rapidly progressive and results
 CC in death within the first year of life.

RT cause megalencephalic leukoencephalopathy with subcortical cysts.";
RL Am. J. Hum. Genet. 68:831-838(2001).
CC -1- FUNCTION: May be a transporter. May act as a non-selective
CC neuronal cation channel.
CC -1- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
CC -1- TISSUE SPECIFICITY: Expressed in the brain, with highest levels
CC found in the amygdala, nucleus caudatus, thalamus and hippocampus.
CC -1- DISEASE: Defects in MLC1 are a cause of megalencephalic
CC leukoencephalopathy with subcortical cysts (MLC). MLC is an
CC autosomal recessive disorder characterized by macrocephaly,
CC deterioration of motor functions with ataxia, and spasticity,
CC eventuating in mental decline. The brain appears swollen on
CC magnetic resonance imaging, with diffuse white-matter
CC abnormalities and the invariable presence of subcortical cysts.
CC -1- DISEASE: Defects in MLC1 are a cause of periodic catatonias (PC), a
CC familial subtype of catatonic schizophrenia which is a genetically
CC heterogeneous disorder characterized by psychosis and psychomotor
CC disturbances.

/note="Organ: Left Pubic Bone; Vector: p773-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI-CGAP_Ed1 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma cell line C55. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996.
First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into p773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dr)18 tail. The sequence tag for this library is GCTCAAGGCT.

Database : SwissProt_40.*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
useful for preventing, diagnosing and/or treating colorectal cancers -
Claim 11; Page 7657-7660; 9803pp; English.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
cancer-associated nucleic acid molecules (N) and proteins (P), where
the proteins are collectively known as colon cancer antigens. The colon
cancer antigens have cytostatic activity and can be used in gene

CC therapy and vaccine production. N and P may be used in the prevention,
CC diagnosis and treatment of diseases associated with inappropriate P
CC expression. For example, N and P may be used to treat disorders
CC associated with decreased expression by rectifying mutations or deletions
CC in a patient's genome that affect the activity of P by expressing
CC inactive proteins or to supplement the patients own production of P.
CC Additionally, N may be used to produce the colon cancer-associated Ps,
CC by inserting the nucleic acids into a host cell and culturing the cell
CC to express the proteins. N and P can be used in the prevention, diagnosis
CC and AAH37789 represent sequences used in the exemplification of the
CC present invention.
CC N.B. Pages 666 to 682 and page 7053 of the sequence listing were
CC missing at time of publication, meaning no sequences are present for
CC SEQ ID NO:1027 to 1052, 7921 and 7922.

Novel isolated human Neuropilin-Hyl and Neuropilin-Hy2 polypeptides useful for treating neurodegenerative diseases e.g. Alzheimer's disease, and for diagnosing and mapping genetic neuronal defects

Claim 3; Page 128-130; 152pp; English.

The invention relates to neuropilin-like polypeptide (neuropilin-Hyl and neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-like polypeptides and polynucleotides are useful in modulating neuronal growth regenerative capacity, treating neurodegenerative diseases, diagnosing and mapping genetic neuronal defects and degenerative diseases like Alzheimer's disease and for treating learning and memory disorders. They are also useful for inducing angiogenesis, neovascularisation, as well as organ growth and development e.g. heart and other tissues. Antagonists of neuropilin-like polypeptides are useful for treating cancers and other malignant diseases. Neuropilin is used to treat platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal nocturnal haemoglobinuria and is used in nerve tissue growth or regeneration, in wound healing, tissue repair and replacement and in sequences of the invention are useful for treating diseases of peripheral nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager syndrome, anyotrophic lateral sclerosis, and traumatic disorders e.g. spinal cord disorders, head trauma and cerebrovascular diseases e.g. stroke, ulcers, immune deficiencies and immune disorders, infections by hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses, mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes mellitus, graft-versus-host disease, myasthenia gravis and autoimmune

Human TANGO 229 polypeptide.

Human; TANGO 229; T cell; heart; liver; pancreas; placenta; brain; lung; skeletal muscle; kidney; spleen; lymph node; peripheral blood leukocyte; bone marrow; thymus tissue; abnormal blood coagulation; asthma; cancer; anapylaxis; hepatitis; multiple sclerosis; coronary artery disease; malaria; atopic dermatitis; amyotrophic lateral sclerosis; meningitis; attention deficit disorder; Crohn's disease; gastroenteritis; goitre; hypoglycaemia; diabetes mellitus; endometriosis; pulmonary embolism; muscular dystrophy; immuno-competence; vertebrae; blood; serum.

XX New isolated nucleic acid molecule for diagnosis, prevention, and therapy of human and other animal disorder, or as modulating agent for regulating cellular processes

XX Claim 8; Fig 1; 263pp; English.

XX The sequence represents human TANGO 229 polypeptide. This protein and similar others exhibit the ability to affect growth, proliferation, survival, differentiation, activity, morphology, or movement/migration of, e.g. T cells and cells of the heart, liver, pancreas, placenta, brain, lung, skeletal muscle, kidney, spleen, lymph node, peripheral blood leukocyte, bone marrow or thymus tissue. They can be used as modulating agents for regulating cellular processes, thus, the proteins and their associated nucleic acids can be used to prognosticate, prevent, diagnose, or treat disorders associated with physiological processes. These disorders include abnormal blood coagulation, asthma, anapylaxis, hepatitis, multiple sclerosis, cancer, coronary artery disease, malaria, atopic dermatitis, amyotrophic lateral sclerosis, meningitis, attention deficit disorder, Crohn's disease, gastroenteritis, goitre, hypoglycaemia, diabetes mellitus, endometriosis, pulmonary embolism and muscular dystrophy. Antibodies to disorders such as these can be made by providing a polypeptide of the invention to an immuno-competent vertebrate and harvesting blood or serum from the vertebrate.

PS Claim 20; SEQ ID NO 31657; 103pp; English.

XX

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX Novel nucleic acid encoding human CUB-domain containing protein, useful for drug screening, diagnosis and treatment of physiological disorders or diseases.

PT Claim 2; Page 27-28; 33pp; English.

PS The sequence represents a novel human protein (NHP) containing a CUB domain (an extracellular domain). CUB proteins have been associated with regulating development, modulating cellular processes and preventing infectious disease. NHP nucleotide sequences are useful for gene therapy of physiological disorders or diseases. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHP nucleotide sequences are useful for detecting mutant or inappropriately expressed NHPs (for example, those proteins associated with obesity, high blood pressure, connective tissue disorders and infertility) for the diagnosis of a disease. The polynucleotides may also be used in screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the identification of compounds that bind to NHP receptors or trigger NHP-mediated pathways.

 PS Claim 3; Page 118-120; 144pp; English.
 XX
 CC The invention relates to an isolated neuropilin-like polypeptide
 CC including neuropilin-Hyl and neuropilin-Hy2, the full length cDNAs
 CC encoding the proteins and the coding regions of the cDNAs. Also included
 CC is a nucleic acid array comprising the cDNAs attached to a surface used
 CC for detecting full-matches or mismatches to the cDNAs. The genes
 CC for neuropilin-Hyl and Hy2 are located on human chromosome 6q21.
 CC The nucleic acid array is useful for detecting full-matches or mismatches
 CC to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful
 CC in modulating neuronal growth, regenerative capacity, treating
 CC neurodegenerative diseases, learning and memory disorders, diagnosing and
 CC mapping genetic neuronal defects and degenerative diseases like
 CC Alzheimer's disease, for inducing angiogenesis, and neovascularisation
 CC and organ growth and development (e.g. the heart). The nervous system
 CC disorders include lesions of central or peripheral nervous systems,
 CC including traumatic lesions, ischaemic lesions, infectious lesions,
 CC degenerative lesions, lesions associated with nutritional diseases or
 CC disorders, neurological lesions, and lesions caused by toxic substances.
 CC The neuropilin-like proteins and cDNAs are also useful as markers for
 CC cancers. The neuropilin-like proteins are useful for regulating cell
 CC proliferation, cell differentiation, stem cell growth factor activity,
 CC for inducing proliferation of neural cells, regeneration of nerve and
 CC brain tissue, for treatment of central and peripheral nervous system
 CC diseases, and neuropathies, such as Parkinson's disease,
 CC Huntington's disease, amyotrophic lateral sclerosis, to regulate
 CC haematopoiesis and treat myeloid and lymphoid cell disorders, various
 CC anaemias, and platelet disorders, such as thrombocytopaenia,
 CC regeneration and treatment of lung or liver fibrosis, reperfusion
 CC injury in various tissues and as a food supplement or molecular
 CC weight marker. The cDNAs are useful in gene identification, genome
 CC mapping, transgenics, as hybridisation probes, for primer design, for
 CC gene chips and as a DNA antigen. The present sequence represents
 CC neuropilin-Hyl.

JC4915
ags protein precursor - rat
N:Alternate names: O-acetyl-Gd3 ganglioside
C:Species: Rattus norvegicus (Norway rat)
C>Date: 26-Sep-1996 #sequence_revision 01-Nov-1996 #text_change 20-Jun-2000
C:Accession: JC4915
R:Ogura, K.; Nara, K.; Watanabe, Y.; Kohno, K.; Tai, T.; Sanai, Y.
Biochem. Biophys. Res. Commun. 225, 932-938, 1996
A:Title: Cloning and expression of cDNA for O-acetylation of GD3 ganglioside.
A:Reference number: JC4915; MUID:96374422; PMID:8780713
A:Accession: JC4915
A:Status: preliminary
A:Molecule type: mRNA
A:Residues: 1-427 <OGU>
A:Cross-references: DDBJ:D84068; NID:g1620006; PIDN:BAAL2210.1; PID:g1620007
A:Experimental source: CST cell
C:Comment: This protein is required for the O-acetylation of disialoganglioside sial:
C:Genetics:
A:Gene: ags
C:Superfamily: milk fat globule protein; discoidin I amino-terminal homology; EGF hor
F:1-21/Domain: signal sequence #status predicted <SIG>

RT "Neuropilin-2, a novel member of the neuropilin family, is a high
RT affinity receptor for the semaphorins Sema E and Sema IV but not Sema
RT III.";
RL Neuron 19:547-559(1997).
CC -!- FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORINS 3C, 3F, VEGF-165
CC AND VEGF-145 ISOFORMS OF VEGF, AND THE PLGF-2 ISOFORM OF PGF.
CC -!- SUBUNIT: NEUROPILIN-2 PROBABLY FORMS AN HETEROMERIC COMPLEX WITH
CC NEUROPILIN-1 IN ORDER TO BE A FUNCTIONAL SEMAPHORIN E RECEPTOR.
CC -!- SUBCELLULAR LOCATION: Type 1 membrane protein.
CC -!- ALTERNATIVE PRODUCTS: 6 ISOFORMS; A22 (SHOWN HERE), A0, A5, A17,
CC B0 AND B5; ARE PRODUCED BY ALTERNATIVE SPLICING.
CC -!- TISSUE SPECIFICITY: EXPRESSED IN DEVELOPING CNS, PNS AND IN SOME
CC NONNEURAL TISSUES INCLUDING LIMB BUDS, DEVELOPING BONES, MUSCLES,
CC INTESTINAL EPITHELIUM, KIDNEY, LUNG AND SUBMANDIBULAR GLAND.
CC -!- DEVELOPMENTAL STAGE: THE EXPRESSION PATTERN IS VERY DYNAMIC AND
CC IS DEVELOPMENTALLY REGULATED.
CC -!- SIMILARITY: BELONGS TO THE NEUROPILIN FAMILY.
CC -!- SIMILARITY: CONTAINS 2 CUB DOMAINS.
CC -!- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -!- SIMILARITY: CONTAINS 1 MAM DOMAIN.

CC -1- FUNCTION: THE MEMBRANE-BOUND ISOFORM IS A RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS. IT BINDS TO SEMAPHORIN 3A, THE PLGF-2 ISOFORM OF PGF, THE VEGF-165 ISOFORM OF VEGF AND VEGF-B. COEXPRESSION WITH KDR RESULTS IN INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS. IT MAY REGULATE VEGF-INDUCED ANGIOGENESIS.
CC -1- FUNCTION: THE SOLUBLE/SNRPL ISOFORM BINDS VEGF-165 AND APPEARS TO INHIBIT ITS BINDING TO CELLS. IT MAY ALSO INDUCE APOPTOSIS BY SEQUESTERING VEGF-165. MAY BIND AS WELL VARIOUS MEMBERS OF THE SEMAPHORIN FAMILY. ITS EXPRESSION HAS AN AVERSE EFFECT ON BLOOD VESSEL NUMBER AND INTEGRITY.
CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. THE SOLUBLE/SNRPL ISOFORM IS SECRETED.
CC -1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; MEMBRANE-BOUND (SHOWN HERE) AND SOLUBLE/SNRPL; ARE PRODUCED BY ALTERNATIVE SPLICING.
CC -1- TISSUE SPECIFICITY: THE EXPRESSION OF MEMBRANE-BOUND AND SOLUBLE/SNRPL ISOFORMS DOES NOT SEEM TO OVERLAP. THE MEMBRANE-BOUND ISOFORM IS EXPRESSED BY THE BLOOD VESSELS OF DIFFERENT TISSUES. IN THE DEVELOPING EMBRYO IT IS FOUND PREDOMINANTLY IN THE NERVOUS SYSTEM. IN ADULT TISSUES, IT IS HIGHLY EXPRESSED IN HEART AND PLACENTA; MODERATELY IN LUNG, LIVER, SKELETAL MUSCLE, KIDNEY

Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
 useful for treating neurodegenerative diseases e.g. Alzheimer's
 disease, and for diagnosing and mapping genetic neuronal defects -

Claim 3; Page 128-130; 152pp; English.

The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
 neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
 like polypeptides and polynucleotides are useful in modulating neuronal
 growth regenerative capacity, treating neurodegenerative diseases,
 diagnosing and mapping genetic neuronal defects and degenerative diseases
 like Alzheimer's disease and for treating learning and memory disorders.
 They are also useful for inducing angiogenesis, neovascularisation, as
 well as organ growth and development e.g. heart and other tissues.
 Antagonists of neuropilin-like polypeptides are useful for treating
 cancers and other malignant diseases. Neuropilin is used to treat
 platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal
 nocturnal haemoglobinuria and is used in nerve tissue growth or
 regeneration, in wound healing, tissue repair and replacement and in
 healing of bones, incisions and ulcers. Compositions comprising the
 sequences of the invention are useful for treating diseases of peripheral
 nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager
 syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g.
 spinal cord disorders, head trauma and cerebrovascular diseases e.g.
 stroke, ulcers, immune deficiencies and immune disorders, infections by
 hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,
 mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g.
 multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis,
 autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes
 mellitus, graft-versus-host disease, myasthenia gravis and autoimmune
 inflammatory eye disease. The nucleic acids of the invention are used in
 gene therapy techniques. The present sequence is human neuropilin-Hy2
 protein. Neuropilin-Hy2 gene is located on chromosome 6q21.

XX

for detecting full-matches or mismatches to the cDNAs. The genes for neuropilin-Hy1 and Hy2 are located on human chromosome 6q21. The nucleic acid array is useful for detecting full-matches or mismatches to the cDNAs. The neuropilin-like proteins and encoding cDNAs are useful in modulating neuronal growth, regenerative capacity, treating neurodegenerative diseases, learning and memory disorders, diagnosing and mapping genetic neuronal defects and degenerative diseases like Alzheimer's disease, for inducing angiogenesis, and neovascularisation and organ growth and development (e.g. the heart). The nervous system disorders include lesions of central or peripheral nervous systems, including traumatic lesions, ischaemic lesions, infectious lesions, degenerative lesions, lesions associated with nutritional diseases or disorders, neurological lesions, and lesions caused by toxic substances. The neuropilin-like proteins and cDNAs are also useful as markers for cancers. The neuropilin-like proteins are useful for regulating cell proliferation, cell differentiation, stem cell growth factor activity, for inducing proliferation of neural cells, regeneration of nerve and brain tissue, for treatment of central and peripheral nervous system diseases, and neuropathies, such as Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, to regulate haematopoiesis and treat myeloid and lymphoid cell disorders, various anaemias, and platelet disorders, such as thrombocytopenia, regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and as a food supplement or molecular weight marker. The cDNAs are useful in gene identification, genome mapping, transgenics, as hybridisation probes, for primer design, for gene chips and as a DNA antigen. The present sequence represents neuropilin-Hy2.

XX Mackay CR, Myers PS, Kirst SJ, Fraser CC, Leiby KR;

XX WPI; 2001-308477/32.

XX N-PSDB; AAS00660.

XX New isolated nucleic acid molecule for diagnosis, prevention, and
 PT therapy of human and other animal disorder, or as modulating agent for
 PT regulating cellular processes

XX Claim 8; Fig 1; 263pp; English.

XX The sequence represents human TANGO 229 polypeptide. This protein and
 CC similar others exhibit the ability to affect growth, proliferation,
 CC survival, differentiation, activity, morphology, or movement/migration
 CC of, e.g. T cells and cells of the heart, liver, pancreas, placenta,
 CC brain, lung, skeletal muscle, kidney, spleen, lymph node, peripheral
 CC blood leukocyte, bone marrow or thymus tissue. They can be used as
 CC modulating agents for regulating cellular processes, thus, the proteins
 CC and their associated nucleic acids can be used to prognosticate, prevent,
 CC diagnose, or treat disorders associated with physiological processes.
 CC These disorders include abnormal blood coagulation, asthma, anaphylaxis,
 CC hepatitis, multiple sclerosis, cancer, coronary artery disease, malaria,
 CC atopic dermatitis, amyotrophic lateral sclerosis, meningitis, attention
 CC deficit disorder, Crohn's disease, gastroenteritis, goitre,
 CC hypoglycaemia, diabetes mellitus, endometriosis, pulmonary embolism and
 CC muscular dystrophy. Antibodies to disorders such as these can be made by
 CC providing a polypeptide of the invention to an immuno-competent
 CC vertebrate and harvesting blood or serum from the vertebrate.

XX PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics; forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity

PS Claim 20; SEQ ID No 31657; 103pp; English.

XX CC The invention relates to isolated polynucleotide (I) and
XX polypeptide (II) sequences. (I) is useful as hybridisation probes,
XX polymerase chain reaction (PCR) primers, oligomers, and for chromosome
XX and gene mapping, and in recombinant production of (II). The
XX polynucleotides are also used in diagnostics as expressed sequence tags
XX for identifying expressed genes. (I) is useful in gene therapy techniques
XX to restore normal activity of (II) or to treat disease states involving
XX (II). (II) is useful for generating antibodies against it, detecting or
XX quantitating a polypeptide in tissue, as molecular weight markers and as
XX a food supplement. (II) and its binding partners are useful in medical
XX imaging of sites expressing (II). (I) and (II) are useful for treating
XX disorders involving aberrant protein expression or biological activity.
XX The polypeptide and polynucleotide sequences have applications in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits to assess biodiversity
XX and to produce other types of data and products dependent on DNA and
XX amino acid sequences. ABG0010-ABG30377 represent novel human
XX diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to identify it as a clone from the
normalized atrium at 16.5 dpc library cDNA Library Preparation:
M.B. Soares Lab Clone distribution: clones will be available

further details.
cDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues. First strand cDNA was primed with a primer
[5' GAGAGAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTNN 3'], cDNA was
prepared by using trehalose thermo-activated reverse transcriptase
and subsequently enriched for full-length by cap-trapper. Second
strand cDNA was prepared with the primer adaptor of sequence[5'
GAGAGAGAGAGAGCGCCCAATTAATTCGAGTAATTAATTAATTCGCCCCC 3']. cDNA
was cleaved with XhoI and SstI. Cloning sites, 5' end: XhoI, 3'
end: SstI. Host: SOLR.

PT Novel nucleic acid encoding human CUB-domain containing protein, useful

PT for drug screening, diagnosis and treatment of physiological disorders
or diseases -
XX
PT
PS Claim 5; Page 29-30; 33pp; English.
XX
CC The sequence represents a novel human protein (NHP) containing a CUB
domain (an extracellular domain). CUB proteins have been associated with
regulating development, modulating cellular processes and preventing
infectious disease. NHP nucleotide sequences are useful for gene therapy
of physiological disorders or diseases. NHP oligonucleotides are useful
as hybridisation probes for screening libraries and assessing gene
patterns. NHP nucleotide sequences are useful for detecting mutant or
inappropriately expressed NHPs (for example, those proteins associated
with obesity, high blood pressure, connective tissue disorders and
infertility) for the diagnosis of a disease. The polynucleotides may also
be used in screening for drugs effective in the treatment of symptomatic
or phenotypic manifestations of perturbing the normal function of NHP in
the body. Nucleotide constructs encoding NHP products are used to
genetically engineer host cells to express such products in vivo. These
host cells allow for the identification of compounds that bind to NHP
receptors or trigger NHP-mediated pathways.

PT. Novel nucleic acid encoding human CUB-domain containing protein, useful
PT for drug screening, diagnosis and treatment of physiological disorders
PT or diseases -
XX
PS Claim 2; Page 27-28; 33pp; English.
XX
CC The sequence represents a novel human protein (NHP) containing a CUB
CC domain (an extracellular domain). CUB proteins have been associated with
CC regulating development, modulating cellular processes and preventing
CC infectious disease. NHP nucleotide sequences are useful for gene therapy
CC of physiological disorders or diseases. NHP oligonucleotides are useful
CC as hybridisation probes for screening libraries and assessing gene
CC patterns. NHP nucleotide sequences are useful for detecting mutant or
CC inappropriately expressed NHPs (for example, those proteins associated
CC with obesity, high blood pressure, connective tissue disorders and
CC infertility) for the diagnosis of a disease. The polynucleotides may also
CC be used in screening for drugs effective in the treatment of symptomatic
CC or phenotypic manifestations of perturbing the normal function of NHP in
CC the body. Nucleotide constructs encoding NHP products are used to
CC genetically engineer host cells to express such products in vivo. These
CC host cells allow for the identification of compounds that bind to NHP
CC receptors or trigger NHP-mediated pathways.

PT	PT	disorders	
XX	XX		
PS	XX	Claim 1; Page 68-69; 75pp; English.	
XX	XX	The present sequence represents a polypeptide sequence which is	
CC	CC	isolated from lymph node stromal cells of fsn +/- mice. The	
CC	CC	polynucleotides and their polypeptides are useful for treating an	
CC	CC	inflammatory disorder, disorder of immune system and cancer selected	
CC	CC	from epithelial, lymphoid, myeloid, stromal and neuronal cancers, a	
CC	CC	viral disorder, in particular HIV infection and for modulating the	
CC	CC	growth of blood vessels. The polypeptides are useful for treating a	
CC	CC	tumour necrosis factor (TNF) mediated disorder, such as those selected	
CC	CC	from arthritis, inflammatory bowel disease and cardiac failure and a	
CC	CC	fibroblast growth factor-mediated disorder. It is also useful in assay	
CC	CC	to determine biological activity, to raise antibodies, to isolate	
CC	CC	corresponding ligands or receptors, to quantify levels of protein or	
CC	CC	cognate corresponding ligand or receptors, as anti-inflammatory agents,	
CC	CC	and in compositions for the treatment of skin, connective tissue and	
CC	CC	immune system diseases. The polynucleotide is useful as marker for	
CC	CC	tissue, as a chromosome marker or tags in the identification of a	
CC	CC	genetic disorder.

PT Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides
PT useful for treating neurodegenerative diseases e.g. Alzheimer's
PT disease, and for diagnosing and mapping genetic neuronal defects
XX
PS Claim 3; Page 123-125; 152pp; English.
XX
CC The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and
CC neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-
CC like polypeptides and polynucleotides are useful in modulating neuronal
CC growth regenerative capacity, treating neurodegenerative diseases,
CC diagnosing and mapping genetic neuronal defects and degenerative diseases
CC like Alzheimer's disease and for treating learning and memory disorders.
CC They are also useful for inducing angiogenesis, neovascularisation, as
CC well as organ growth and development e.g. heart and other tissues.
CC Antagonists of neuropilin-like polypeptides are useful for treating
CC cancers and other malignant diseases. Neuropilin is used to treat

RA Fujisawa H.;
RT "Expression of a cell adhesion molecule, neuropilin, in the
RL developing chick nervous system.";
RL Dev. Biol. 170:207-222(1995).
CC -1- FUNCTION: RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE
CC CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF
CC CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS
CC SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS (BY
CC SIMILARITY). SEEMS TO HAVE CALCIUM-INDEPENDENT CELL ADHESION
CC PROPERTIES.
CC -1- SUBCELLULAR LOCATION: Type I membrane protein.
CC -1- TISSUE SPECIFICITY: DEVELOPING NERVOUS SYSTEM; OPTIC TECTUM
CC (LAYERS D AND E OF SGFS), AMACRINE CELLS OF RETINA, NEURITES OF
CC DORSAL ROOT GANGLIA. ALSO EXPRESSED IN NONNEURONAL CELLS, E.G.
CC BLOOD VESSELS IN THE ENTIRE EMBRYO.
CC -1- SIMILARITY: BELONGS TO THE NEUROPILIN FAMILY.
CC -1- SIMILARITY: CONTAINS 2 CUB DOMAINS.
CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -1- SIMILARITY: CONTAINS 1 MAM DOMAIN.

RT "Porcine factor V: cDNA cloning, gene mapping, three-dimensional
RT protein modeling of membrane binding sites and comparative anatomy of
RT domains."
RL Cell. Mol. Life Sci. 58:148-159(2001).
CC -I- FUNCTION: Coagulation factor V is a cofactor that participates
CC with factor Xa to activate prothrombin to thrombin.
CC -I- SUBUNIT: Factor Va is composed of a heavy chain and a light
CC chain, noncovalently bound. The interaction between the two chains
CC is calcium-dependent.
CC -I- DOMAIN: Domain B contains 41 X 9 AA tandem repeats. Domains C1
CC and C2 may be involved in membrane binding.
CC -I- PTM: Thrombin activates factor V proteolytically to the active
CC cofactor, factor Va (formation of a heavy chain at the N-
CC terminus and a light chain at the C-terminus).
CC -I- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
CC 2 PLASTOCYANIN-LIKE REPEATS.
CC -I- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -I- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

 RT "The complete cDNA sequence of bovine coagulation factor V.";
 RL J. Biol. Chem. 267:2971-2978(1992).
 CC 1- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
 CC WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
 CC 1- SUBUNIT: Factor Va is composed of a heavy chain and a light
 CC chain, noncovalently bound. The interaction between the two chains
 CC is calcium-dependent.
 CC 1- DOMAIN: Domain B contains 29.5 X 9 AA tandem repeats, and 2 X 14
 CC AA repeats.
 CC 1- PTM: Thrombin activates factor V proteolytically to the active
 CC cofactor, factor Va (formation of a heavy chain at the N-
 CC terminus and a light chain at the C-terminus).
 CC 1- PTM: SULFATION IS REQUIRED FOR EFFICIENT THROMBIN CLEAVAGE AND
 CC ACTIVATION AND FOR FULL PROCOAGULANT ACTIVITY (BY SIMILARITY).
 CC 1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
 CC 2 PLASTOCYANIN-LIKE REPEATS.
 CC 1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
 CC 1- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

CC -1- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
CC -1- SUBUNIT: Factor Va is composed of a heavy chain and a light
chain, noncovalently bound. The interaction between the two chains
is calcium-dependent.
CC -1- DOMAIN: DOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA
REPEATS.
CC -1- PTM: Thrombin activates factor V proteolytically to the active
cofactor, factor Va (formation of a heavy chain at the N-
terminus and a light chain at the C-terminus).
CC -1- PTM: SULFATION IS REQUIRED FOR EFFICIENT THROMBIN CLEAVAGE AND
ACTIVATION AND FOR FULL PROCOAGULANT ACTIVITY.
CC -1- DISEASE: OWEN PARAHEMOPHILIA, AN HEMORRHAGIC DIATHESIS, IS DUE
TO A DEFICIENCY OF FACTOR V. OTHER DEFECTS IN F5 RESULTS IN A
FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APCR
MUTATION IS FOUND IN ABOUT 5% OF THE POPULATION WHICH SUGGEST THAT
A SLIGHT THROMBOTIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL
IMPLANTATION.
CC -1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
2 PLASTOCYANIN-LIKE REPEATS.
CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -1- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 15
US-09-989-293A-62
; Sequence 62, Application US/09989293A
; Patent No. US2002017164A1
; GENERAL INFORMATION:
; APPLICANT: Ashkenazi, Avi J.
; APPLICANT: Baker, Kevin P.
; APPLICANT: Botstein, David
; APPLICANT: Desnoyers, Luc
; APPLICANT: Eaton, Dan L.
; APPLICANT: Ferrara, Napoleone
; APPLICANT: Fong, Sherman
; APPLICANT: Gerber, Hanspeter
; APPLICANT: Gerritsen, Mary E.
; APPLICANT: Goddard, Audrey
; APPLICANT: Godowski, Paul J.
; APPLICANT: Grimaldi, J. Christopher
; APPLICANT: Gurney, Austin L.
; APPLICANT: Kljavin, Ivar J.
; APPLICANT: Napier, Mary A.
; APPLICANT: Pan, James
; APPLICANT: Paoni, Nicholas F.
; APPLICANT: Roy, Margaret Ann
; APPLICANT: Stewart, Timothy A.
; APPLICANT: Tumas, Daniel
; APPLICANT: Watanabe, Colin K.
; APPLICANT: Williams, P. Mickey
; APPLICANT: Wood, William I.
; APPLICANT: Zhang, Zemin
; TITLE OF INVENTION: Secreted and Transmembrane Polypeptides and Nucleic
; FILE REFERENCE: P2730PIC56
; CURRENT APPLICATION NUMBER: US/09/989,293A
; CURRENT FILING DATE: 2001-11-20
; PRIOR APPLICATION NUMBER: 60/049787
; PRIOR FILING DATE: 1997-06-16

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note=Organ: Left Pubic Bone; Vector: pT7T3-Pac									
/pharmac: with a modified polylinker; Site 1: Ecor I;									
Site 2: Not I; NCI CGAP EDI is a normalized cDNA library									
containing the following tissue(s): Chondrosarcoma cell									
line CS5. The library was constructed according to Bonaldi									
, Lennon and Soares, Genome Research, 6:791-806, 1996.									
First strand cDNA synthesis was primed with an oligo-dT									
primer containing a Not I site. Double stranded cDNA was									
ligated to an Ecor I adaptor, digested with Not I, and									
cloned directionally into pT7T3-Pac vector. The									
oligonucleotide used to prime the synthesis of									
first-strand cDNA contains a library tag sequence that is									
located between the Not I site and the (dT)18 tail. The									
sequence tag for this library is GCTCAAGGCT.

 COMMENT Contact: Robert Strausberg, Ph.D.
 Email: cgaps-remail.nih.gov
 The sequence contained an oligo-dT track that was present in the
 oligonucleotide that was used to prime the synthesis of first
 strand cDNA and therefore this may represent a bonafide poly A
 tail. cDNA Library Preparation: M.B. Soares Lab Clone Distribution:
 NCI-CGAP clone distribution information can be found through the
 I.M.A.G.E. Consortium/LLNL at:
www-bio.llnl.gov/bbrp/image/image.html

Seq primer: M13 Forward
 POLYA=Yes.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
XX useful for preventing, diagnosing and/or treating colorectal cancers -
XX Claim 11; Page 7657-7660; 9803pp; English.

XX AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
XX cancer-associated nucleic acid molecules (N) and proteins (P), where
XX the proteins are collectively known as colon cancer antigens. The colon
XX cancer antigens have cytostatic activity and can be used in gene
XX therapy and vaccine production. N and P may be used in the prevention,
XX diagnosis and treatment of diseases associated with inappropriate P
XX expression. For example, N and P may be used to treat disorders
XX associated with decreased expression by rectifying mutations or deletions
XX in a patient's genome that affect the activity of P by expressing
XX inactive proteins or to supplement the patients own production of P.
XX Additionally, N may be used to produce the colon cancer-associated Ps,
XX by inserting the nucleic acids into a host cell and culturing the cell
XX to express the proteins. N and P can be used in the prevention, diagnosis
XX and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
XX and AAB7789 represent sequences used in the exemplification of the
XX present invention.

XX N.B. Pages 666 to 682 and page 7053 of the sequence listing were
XX missing at time of publication, meaning no sequences are present for
XX SEQ ID NO:1027 to 1052, 7921 and 7922.

XX Propionibacterium acnes polypeptides and nucleic acids useful for
XX vaccinating against and diagnosing infections, especially useful for
XX treating acne vulgaris -

XX Example 1; SEQ ID NO 21378; 1069pp; English.

XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
XX polypeptides. The proteins and their associated DNA sequences are used in
XX the treatment, prevention and diagnosis of medical conditions caused by
XX P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
XX pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
XX P. acnes is also involved in infections of bone, joints and the central
XX nervous system, however it is particularly involved in the inflammatory
XX lesions associated with acne vulgaris. A method for detecting the
XX presence or absence of P. acnes in a patient comprises contacting a
XX sample with a binding agent that binds to the proteins of the invention
XX and determining the amount of bound protein in the sample. The
XX polypeptides may be used as antigens in the production of antibodies
XX specific for P. acnes proteins. These antibodies can be used to
XX downregulate expression and activity of P. acnes polypeptides and
XX therefore treat P. acnes infections. The antibodies may also be used as
XX diagnostic agents for determining P. acnes presence, for example, by
XX enzyme linked immunosorbent assay (ELISA).

XX Note: The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO.

PT New spatially-addressable set of single exon nucleic acid probes,
XX useful for measuring gene expression in sample derived from human
XX breast, comprises number of single exon nucleic acid probes
XX
PS Claim 27; SEQ ID NO 13245; 327pp + sequence listing; English.
XX
CC The invention relates to a spatially-addressable set of single exon
XX nucleic acid probes for measuring gene expression in a sample derived
XX from human breast and Bt 474 cells. The method involves contacting
XX the probes with a collection of detectably labelled nucleic acids
XX derived from mRNA of human breast, and then measuring the label
XX bound to each probe of the microarray. The probes are useful for
XX verifying the expression of regions of genomic DNA predicted to
XX encode proteins. They are useful for gene discovery, and for
XX determining predisposition and/or prognosing breast disease. Gene
XX expression analysis is useful for assessing the toxicity of chemical
XX agents on cells. The microarray of this invention presents a far greater
XX diversity of probes for measuring gene expression, with far less bias
XX than expressed sequence tag microarrays. The method is suitable for
XX rapid production of functional information from genomic sequence. The
XX present sequence is a peptide encoded by a single exon nucleic acid
XX probe of the invention.
CC Note: The sequence data for this patent did not form part of the
XX printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX
XX Single exon nucleic acid probes for analyzing gene expression in human
PT hearts -
XX
XX Claim 15; SEQ ID NO 22652; 530pp; English.
PS
XX
XX The present invention relates to single exon nucleic acid probes for
CC measuring human gene expression in a sample derived from human heart (see
CC AB21535-ABA41305). The present sequence is a protein encoded by one such
CC probe. The probes may be used for predicting, measuring and displaying
CC gene expression in samples derived from the human heart via microarrays.
CC By measuring gene expression, the probes are useful for predicting,
CC diagnosing, grading, staging, monitoring and prognosing diseases of the
CC human heart and vascular system e.g. cardiovascular disease,
CC hypertension, cardiac arrhythmias and congenital heart disease.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PT Human genome-derived single exon nucleic acid probes useful for
PT analyzing gene expression in human cervical epithelial cells -
XX XX
PS Claim 27; SEQ ID NO 21281; 487pp; English.
XX XX
XX The present invention relates to human single exon nucleic acid probes
XX (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded
XX by one such probe. The SENPs are derived from human HeLa cells. The SENPs
XX can be used to produce a single exon microarray, which can be used for
XX measuring human gene expression in a sample derived from human cervical
XX epithelial cells. By measuring gene expression, the probes are therefore
XX useful in grading and/or staging of diseases of the cervix, notably
XX cervical cancer.
XX CC Note: The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences.

 XX Spatially-addressable set of single exon nucleic acid probes, used to
 PT measure gene expression in human lung samples -
 XX Claim 27; SEQ ID NO 27887; 634pp; English.
 XX The invention relates to a spatially-addressable set of single exon
 CC nucleic acid probes for measuring gene expression in a sample derived
 CC from human lung comprising single exon nucleic acid probes having one of
 CC 12614 nucleic acid sequences mentioned in the specification, or their
 CC complements or the 12387 open reading frames derived from the 12614
 CC probes. Also included are a microarray comprising the novel set of
 CC probes; the novel set of probes which hybridise at high stringency to a
 CC nucleic acid expressed in the human lung; measuring gene expression in a
 CC sample derived from human lung, comprising (a) contacting the array with
 CC a collection of detectably labeled nucleic acids derived from human lung
 CC mRNA, and (b) measuring the label detectably bound to each probe of
 CC the array; identifying exons in a eukaryotic genome, comprising
 CC (a) algorithmically predicting at least one exon from genomic sequences
 CC of the eukaryote; and (b) detecting specific hybridisation of detectably
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
 CC having a fragment identical to the predicted exon, the probe is included
 CC in the above mentioned microarray; assigning exons to a single gene,
 CC comprising (a) identifying exons from genomic sequence by the method
 CC above and (b) measuring the expression of each of the exons in several
 CC tissues and/or cell types using hybridisation to a single exon
 CC microarrays having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types indicates that
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene
 CC expression analysis, and for identifying exons in a gene, particularly
 CC using human lung derived mRNA and for the study of lung diseases
 CC such as asthma, lung cancer, chronic obstructive pulmonary disease
 CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary
 CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,
 CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary
 CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,
 CC pulmonary alveolar proteinosis, Karagenen syndrome, fibrocystic
 CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension
 CC and hyaline membrane disease. The present sequence is a peptide/protein
 CC encoded by a single exon probe of the invention.
 CC Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic
 CC format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

 XX New nucleic acid sequence for manufacturing polypeptides for treating
 PT endocrine cancers comprises a cDNA encoding a splicing isoform of
 PT mammalian growth factor receptor (GFR)alpha4 -
 XX Claim 9; Fig 18B; 143pp; English.
 XX The present invention describes an isolated and purified cDNA sequence
 CC encoding a splicing isoform of a mammalian growth factor receptor
 CC (GFR)alpha4, or its fragments. GFRalpha4 sequences have cytostatic,
 CC osteoprotective, neuroprotective and anticonvulsant activities. GFRalpha4 is
 CC a glycosyl-phosphatidylinositol (GPI)-linked glial cell line-derived
 CC neurotrophic factor (GDNF) family alpha-receptor. A GFRalpha4
 CC polynucleotide sequence can be used for recording GFRalpha4 mediated
 CC signalling in neurons or endocrine cells such as thyroid calcitonin-
 CC producing C-cells, parathyroid gland cells, adrenal chromaffin cells, or
 CC cells from the pituitary intermediate lobe. GFRalpha4 protein and
 CC polynucleotide sequences can be used for manufacturing polypeptides
 CC useful for diagnosing and/or treating tumours in parathyroid gland cells,
 CC adrenal chromaffin cells, cells of pituitary intermediate lobe,
 CC neoplasia, endocrine tumours, medullary thyroid carcinoma and
 CC pheochromocytoma, parathyroid hyperplasia, neuronal disorders or for
 CC preventing neuronal death or aberrant axonal sprouting. The present
 CC sequence represents the mouse GFRalpha4 protein, designated GPI-anchored
 CC isoform a1, from the present invention.

CC -!- FUNCTION: SUBUNIT OF THE INTEGRAL MEMBRANE V0 COMPLEX OF VACUOLAR
CC ATPASE. VACUOLAR ATPASE IS RESPONSIBLE FOR ACIDIFYING A VARIETY OF

```

CC INTRACELLULAR COMPARTMENTS IN EUKARYOTIC CELLS, THUS PROVIDING
CC MOST OF THE ENERGY REQUIRED FOR TRANSPORT PROCESSES IN THE
CC VACUOLAR SYSTEM.
CC -|- CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) -> ADP + phosphate +
CC H(+)(Out).
CC -|- SUBUNIT: V-ATPase is a heteromultimeric enzyme composed of a
CC peripheral catalytic VI complex (components A to H) attached to
CC an integral membrane V0 proton pore complex (components: a, c, c',
CC c'', and d).
CC -|- SIMILARITY: BELONGS TO THE V-ATPASE V0D/AC39 SUBUNIT FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT *Cloning and characterization of developmental endothelial locus-1: an
RT embryonic endothelial cell protein that binds the alphabeta3 integrin
RT receptor.
RT Genes Dev. 12:21-33(1998).
RL -1- FUNCTION: PROMOTES ADHESION OF ENDOTHELIAL CELLS THROUGH
RL INTERACTION WITH THE ALPHA-V BETA3 INTEGRIN RECEPTOR. INHIBITS
RL FORMATION OF VASCULAR-LIKE STRUCTURES. MAY BE INVOLVED IN
RL REGULATION OF VASCULAR MORPHOGENESIS OR REMODELING IN EMBRYONIC
RL DEVELOPMENT.
CC -1- SUBCELLULAR LOCATION: EXTRACELLULAR MATRIX.
CC -1- ALTERNATIVE PRODUCTS: TWO ISOFORMS; LONG ISOFORM (SHOWN HERE) AND
CC SHORT ISOFORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
CC -1- TISSUE SPECIFICITY: EXPRESSED IN ANGIOBLASTS AND EARLY ENDOTHELIAL
CC CELLS. BY EMBRYONIC DAY 13.5, ALSO EXPRESSED IN A RESTRICTED GROUP
CC OF NON-ENDOTHELIAL CELLS INCLUDING CHONDROCYTES AND RETINAL
CC NEURONS.
CC -1- DEVELOPMENTAL STAGE: EXPRESSED IN THE EMBRYO FROM DAY 7. AFTER DAY
CC 15.5, EXPRESSION DECREASES AND DISAPPEARS COMPLETELY BY THE TIME
CC OF BIRTH.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

----- Project Information
Center project name: L1852
Center clone name: 319_J_24
----- Summary Statistics
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 182870 bases at least Q40
Consensus quality: 187032 bases at least Q30
Consensus quality: 188925 bases at least Q20
Insert size: 194000; agarose-fp
Insert size: 191247; sum-of-contents
Quality coverage: 5.0 in Q20 bases; agarose-fp
Quality coverage: 5.1 in Q20 bases; sum-of-contents

* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 472: contig of 472 bp in length
* 473 572: gap of 100 bp
* 573 3945: contig of 3373 bp in length
* 3946 4045: gap of 100 bp
* 4046 11056: contig of 7011 bp in length
* 11057 11156: gap of 100 bp
* 11157 17728: contig of 6572 bp in length
* 17729 17828: gap of 100 bp
* 17829 30556: contig of 12728 bp in length
* 30557 30656: gap of 100 bp
* 30657 49294: contig of 18638 bp in length
* 49295 49394: gap of 100 bp
* 49395 64509: contig of 15115 bp in length
* 64510 64609: gap of 100 bp
* 64610 83042: contig of 18433 bp in length
* 83043 83142: gap of 100 bp
* 83143 112373: contig of 29231 bp in length
* 112374 112473: gap of 100 bp
* 112474 145663: contig of 33190 bp in length
* 145664 145763: gap of 100 bp
* 145764 192247: contig of 46484 bp in length.

QY	497	-----	497	HTG.

the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

COMMENT

Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help@bcm.tmc.edu

Project Information

Center project name: CH230-234N3

Center clone name: CH230-234N3

Summary Statistics

Sequencing vector: Plasmid

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 145293 bases at least Q40

Consensus quality: 154399 bases at least Q30

Consensus quality: 161802 bases at least Q20

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently

* consists of 74 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N's, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1	1310	contig of 1310 bp in length

----- Project Information

Center project name: L7942

Center clone name: 322_A_20

* NOTE: This record contains 164 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Factor 8 homolog polypeptides and nucleic acids encoding them for
 PT treating coagulation related disorders such as hemophilia and stroke

XX Claim 1; Page 61-64; 68pp; English.

CC The present sequence is a cDNA encoding human Factor 8 homologue (F8H)
 CC which is a coagulation cofactor. The protein is selectively expressed in
 CC haematopoietic, heart and reproductive tissues. It has haemostatic and
 CC cerebroprotective activities. The F8H contains a Factor 5/8 signature
 CC and is useful as a therapeutic for treating coagulation related diseases
 CC such as haemophilia and stroke. The nucleic acid is useful as
 CC hybridisation probe and amplification primer for detecting deficiencies
 CC in the level of F8H mRNA, for screening F8H gene mutations and for
 CC monitoring regulation of gene expression. Fragments of the nucleic acid
 CC are also useful as diagnostic probes and primers, and can be used in
 CC screening methods such as those using DNA chips. The present sequence is
 CC also useful as a target to screen therapeutically useful modulators
 CC of the F8H.

XX	
CC	AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
CC	cancer-associated nucleic acid molecules (N) and proteins (P), where

The proteins are collectively known as colon cancer antigens. The col-
cancer antigens have cytostatic activity and can be used in gene
therapy and vaccine production. N and P may be used in the prevention,
diagnosis and treatment of diseases associated with inappropriate P
expression. For example, N and P may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient's genome that affect the activity of P by expressing
inactive proteins or to supplement the patients own production of P.
Additionally, N may be used to produce the colon cancer-associated Ps,
by inserting the nucleic acids into a host cell and culturing the cell
to express the proteins. N and P can be used in the prevention, diagnosis
and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
and AAH77789 represent sequences used in the exemplification of the
present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were
missing at time of publication, meaning no sequences are present for
CC SEQ ID NO:1027 to 1052, 7921 and 7922.

Novel isolated human Neuropilin-Hy1 and Neuropilin-Hy2 polypeptides useful for treating neurodegenerative diseases e.g. Alzheimer's disease, and for diagnosing and mapping genetic neuronal defects -

Claim 1; Page 126-128; 152pp; English.

The invention relates to neuropilin-like polypeptide (neuropilin-Hy1 and neuropilin-Hy2) and their corresponding nucleic acids. The neuropilin-like polypeptides and polynucleotides are useful in modulating neuronal growth regenerative capacity, treating neurodegenerative diseases, diagnosing and mapping genetic neuronal defects and degenerative diseases like Alzheimer's disease and for treating learning and memory disorders. They are also useful for inducing angiogenesis, neovascularisation, as well as organ growth and development e.g. heart and other tissues. Antagonists of neuropilin-like polypeptides are useful for treating cancer and other malignant diseases. Neuropilin is used to treat platelet disorders e.g. thrombocytopaenia, plastic anaemia and paroxysmal nocturnal haemoglobinuria and is used in nerve tissue growth or regeneration, in wound healing, tissue repair and replacement and in healing of bones, incisions and ulcers. Compositions comprising the sequences of the invention are useful for treating diseases of peripheral nervous system e.g. Parkinson's disease, Huntington's disease, Shy-Drager syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g. spinal cord disorders, head trauma and cerebrovascular diseases e.g. stroke, ulcers, immune deficiencies and immune disorders, infections by hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses,

CC	The present invention provides the protein and coding sequences of 444
CC	novel human proteins. These were isolated from expressed sequences tags
CC	(ESTs). They can be used to stimulate cell growth, to regulate
CC	haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
CC	e.g. in burn treatment, to regulate the immune system e.g. to treat
CC	multiple sclerosis, to regulate the immune system e.g. to treat
CC	multiple sclerosis, to regulate activin or inhibin e.g. to treat
CC	infertility, to regulate haemostasis or thrombolysis e.g. to treat
CC	stroke and cancer, to screen for drugs, to treat inflammatory conditions
CC	e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.
CC	Parkinson's disease. The present sequence is a coding sequence of the
CC	invention.

XX New isolated polynucleotide and encoded polypeptides, useful in

PT diagnostics, forensics, gene mapping, identification of mutations

PT responsible for genetic disorders or other traits and to assess

PT biodiversity

XX Claim 1; SEQ ID No 1289; 103pp; English.

PS The invention relates to isolated polynucleotide (I) and

XX polypeptide (II) sequences. (I) is useful as hybridisation probes,

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome

CC and gene mapping, and in recombinant production of (II). The

CC polynucleotides are also used in diagnostics as expressed sequence tags

CC for identifying expressed genes. (I) is useful in gene therapy techniques

CC to restore normal activity of (II) or to treat disease states involving

CC (II). (II) is useful for generating antibodies against it, detecting or

CC quantitating a polypeptide in tissue, as molecular weight markers and as

CC a food supplement. (II) and its binding partners are useful in medical

CC Imaging of sites expressing (II). (I) and (II) are useful for treating
 CC disorders involving aberrant protein expression or biological activity.
 CC The polypeptide and polynucleotide sequences have applications in
 CC diagnostics, forensics, gene mapping, identification of mutations
 CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. AAS64197-AAS94564 represent novel human
 CC diagnostic coding sequences of the invention.
 CC Note: The sequence data for this patent did not appear in the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences.

 XX Novel nucleic acids, used to develop products for the diagnosis and
 PT treatment of disorders involving unwanted cell proliferation,
 PT particularly cancers, especially colon cancer .
 XX Claim 15; Page 322; 469pp; English.
 XX AAZ79917 to AAZ80766 represent double stranded cDNA clones isolated from
 CC the human colorectal adenocarcinoma (colon cancer) cell line SW480. The
 CC cDNA clones can be used to generate antisense oligonucleotides which
 CC can be used for antisense therapy. Methods and products from the present
 CC invention can be used for identifying and/or classifying cancerous cells
 CC present in a human tumour, particularly in solid tumours, e.g.
 CC carcinomas and sarcomas, e.g. breast or colon cancers. The cDNA clones
 CC can be used for developing agents for the diagnosis and treatment of
 CC disorders involving unwanted cell proliferation, such as neoplasia,
 CC dysplasia or hyperplasia.

XX New isolated nucleic acid molecule for diagnosis, prevention, and
 PT therapy of human and other animal disorder, or as modulating agent for
 PT regulating cellular processes

XX

PS Claim 1; Fig 1; 263pp; English.

XX The sequence represents a cDNA which encodes human TANGO 229 polypeptide.
 CC This protein and similar others exhibit the ability to affect growth,
 CC proliferation, survival, differentiation, activity, morphology, or
 CC movement/migration of, e.g. T cells and cells of the heart, liver,
 CC pancreas, placenta, brain, lung, skeletal muscle, kidney, spleen, lymph
 CC node, peripheral blood leukocyte, bone marrow or thymus tissue. They can
 CC be used as modulating agents for regulating cellular processes, thus, the
 CC proteins and their associated nucleic acids can be used to prognosticate,
 CC prevent, diagnose, or treat disorders associated with physiological
 CC processes. These disorders include abnormal blood coagulation, asthma,
 CC anaphylaxis, hepatitis, multiple sclerosis, cancer, coronary artery
 CC disease, malaria, atopic dermatitis, amyotrophic lateral sclerosis,
 CC meningitis, attention deficit disorder, Crohn's disease, gastroenteritis,
 CC goitre, hypoglycaemia, diabetes mellitus, endometriosis, pulmonary
 CC embolism and muscular dystrophy. Antibodies to disorders such as these
 CC can be made by providing a polypeptide of the invention to an
 CC immuno-competent vertebrate and harvesting blood or serum from the
 CC vertebrate.

XX Human genome-derived single exon nucleic acid probes useful for
XX analyzing gene expression in human fetal liver -
XX
XX Claim 1; SEQ ID NO 8998; 639pp + sequence listing; English.
XX
XX The invention relates to a single exon nucleic acid probe for
XX measuring human gene expression in a sample derived from human foetal
XX liver. The single exon nucleic acid probes may be used for predicting,
XX measuring and displaying gene expression in samples derived from human
XX foetal liver. The present sequence is a single exon nucleic acid
XX probe of the invention.
XX

PT Single exon nucleic acid probes for analyzing gene expression in human brains -

XX

PS Example 4; SEQ ID NO: 8966; 650pp + Sequence Listing; English.

XX The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

     Project of Genome Exploration Research Group in Riken
     Genomic Sciences Center and Genome Science Laboratory in
     RIKEN. Division of Experimental Animal Research in Riken
     contributed to prepare mouse tissues. 1st strand cDNA was
     primed with a primer [5'
     GAGAGAGAGAAGGATCCAGAGCTCTTTTATTTTNN 3'], cDNA was
     prepared by using trehalose thermo-activated reverse
     transcriptase and subsequently enriched for full-length by
     cap-trapper. cDNA went through one round of normalization
     to Rot = 20.0 and subtraction to Rot = 459.0. Second
     strand cDNA was prepared with the primer adapter of
     sequence [5' GAGAGAGAGATTCGATTAATAATTAATCCCTCCCTCC
     3']. cDNA was cleaved with XhoI and BamHI. Vector: a
     modified pBluescript KS(+) after bulk excision from Lambda
     FLC I."

prepared and sequenced in Mouse Genome Encyclopedia
Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in
RIKEN, Division of Experimental Animal Research in Riken
contributed to prepare mouse tissues. 1st strand cDNA was
primed with a primer [5',
GAGAGAGAGCGCGCGCACTCGAGTTTTTTTTTTTNN 3'], cDNA was
prepared by using trehalose thermo-activated reverse
transcriptase and subsequently enriched for full-length by
cap-trapper. Second strand cDNA was prepared with the
primer adapter of sequence [5',
GAGAGAGAGATTCGAGTTAATTAAATTCCTCCCGCCCCCCC 3']. cDNA
was cleaved with BamHI and XhoI. Vector: a modified
pBluescript KS(+) after bulk excision from Lambda FLC I."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 DEFINITION
 2032a05.s1 Stratagene colon (#937204) Homo sapiens cDNA clone
 IMAGE:588560 3' similar to TR:G704441 G704441 HYPOTHETICAL 40.0 KD
 PROTEIN,, mRNA sequence.
 ACCESSION AAL47037
 VERSION AAL47037.1 GI:1716444
 KEYWORDS EST.
 SOURCE human.
 ORGANISM Homo sapiens
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
 Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
 REFERENCE 1 (bases 1 to 671)

A:Title: Thrombin-catalyzed activation of recombinant human factor V.
A:Reference number: A56139; MUID:95210278; PMID:7696276
A:Contents: annotation; thrombin cleavage sites
C:Comment: Factor V is activated by thrombin and partially by coagulation factor Xa.
C:Genetics:
A:Gene: GDB:F5
A:Cross-references: GDB:119896; OMIM:227400
A:Map position: 1q23-1q23
A:Introns: 53/2; 84/1; 125/1; 196/1; 244/1; 318/1; 373/2; 432/3; 466/1; 537/3; 588/1;
C:Function:
A:Pathway: blood coagulation
C:Superfamily: coagulation factor V; discoidin I amino-terminal homology; ferroxidase
C:Keywords: blood coagulation; duplication; glycoprotein; phospholipid binding; plasm
F:1-28/Domain: signal sequence #status predicted <SIG>
F:29-2224/Product: coagulation factor V #status predicted <MAT>
F:29-737/Product: coagulation factor Va heavy chain #status experimental <VAH>
F:33-329/Domain: ferroxidase repeat homology <FO1>

RL CC
CC -!- FUNCTION: Coagulation factor V is a cofactor that participates with factor Xa to activate prothrombin to thrombin.
CC -!- SUBUNIT: Factor Va is composed of a heavy chain and a light chain, noncovalently bound. The interaction between the two chains is calcium-dependent.
CC -!- DOMAIN: Domain B contains 41 X 9 AA tandem repeats. Domains C1 and C2 may be involved in membrane binding.
CC -!- PTM: Thrombin activates factor V proteolytically to the active cofactor, factor Va (formation of a heavy chain at the N-terminus and a light chain at the C-terminus).
CC -!- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF 2 PLASTOCYANIN-LIKE REPEATS.
CC -!- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -!- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

 CC -1- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
 CC WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
 CC -1- SUBUNIT: Factor Va is composed of a heavy chain and a light
 CC chain, noncovalently bound. The interaction between the two chains
 CC is calcium-dependent.
 CC -1- DOMAIN: Domain B contains 29.5 x 9 AA tandem repeats, and 2 x 14
 CC AA repeats.
 CC -1- PTM: Thrombin activates factor V proteolytically to the active
 CC cofactor, factor Va (formation of a heavy chain at the N-
 CC terminus and a light chain at the C-terminus).
 CC -1- PTM: SULFATION IS REQUIRED FOR EFFICIENT THROMBIN CLEAVAGE AND
 CC ACTIVATION AND FOR FULL PROCOAGULANT ACTIVITY (BY SIMILARITY).
 CC -1- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
 CC 2 PLASTOCYANIN-LIKE REPEATS.
 CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
 CC -1- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

CC -!- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
CC -!- SUBUNIT: Factor Va is composed of a heavy chain and a light
chain, noncovalently bound. The interaction between the two chains
is calcium-dependent.
CC -!- DOMAIN: DOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA
REPEATS.
CC -!- PTM: Thrombin activates factor V proteolytically to the active
terminus, factor Va (formation of a heavy chain at the N-
terminus and a light chain at the C-terminus).
CC -!- PTM: SULFATION IS REQUIRED FOR EFFICIENT THROMBIN CLEAVAGE AND
ACTIVATION AND FOR FULL PROCOAGULANT ACTIVITY.
CC -!- DISEASE: OWREN PARAHEMOPHILIA, AN HEMORRHAGIC DIATHESIS, IS DUE
TO A DEFICIENCY OF FACTOR V. OTHER DEFECTS IN F5 RESULTS IN A
FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APCR
MUTATION IS FOUND IN ABOUT 5% OF THE POPULATION WHICH SUGGEST THAT
A SLIGHT THROMBOTIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL
IMPLANTATION.
CC -!- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF
2 PLASTOCYANIN-LIKE REPEATS.
CC -!- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
CC -!- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.

CC -!- FUNCTION: MAY BE INVOLVED IN PHOSPHOLIPID BINDING. BINDS
CC SPECIFICALLY TO ROTAVIRUS AND INHIBITS ITS REPLICATION.
CC -!- FUNCTION: MEDIN IS THE MAIN CONSTITUENT OF AORTIC MEDIAL AMYLOID.
CC -!- SUBCELLULAR LOCATION: PERIPHERAL MEMBRANE PROTEIN.
CC -!- TISSUE SPECIFICITY: MAMMARY EPITHELIAL CELL SURFACES AND AORTIC
CC MEDIA. OVEREXPRESSED IN SEVERAL CARCINOMAS.
CC -!- PFM: MEDIN HAS A RAGGED N-TERMINUS WITH MINOR SPECIES STARTING AT
CC AMINO ACID 264 AND 273.
CC -!- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
CC -!- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -1- FUNCTION: PROMOTES ADHESION OF ENDOTHELIAL CELLS THROUGH
CC INTERACTION WITH THE ALPHA-V BETA3 INTEGRIN RECEPTOR. INHIBITS
CC FORMATION OF VASCULAR-LIKE STRUCTURES. MAY BE INVOLVED IN
CC REGULATION OF VASCULAR MORPHOGENESIS OR REMODELING IN EMBRYONIC
CC DEVELOPMENT.
CC -1- SUBCELLULAR LOCATION: EXTRACELLULAR MATRIX.
CC -1- ALTERNATIVE PRODUCTS: TWO ISOFORMS: LONG ISOFORM (SHOWN HERE) AND
CC SHORT ISOFORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
CC -1- TISSUE SPECIFICITY: EXPRESSED IN ANGIOBLASTS AND EARLY ENDOTHELIAL
CC CELLS. BY EMBRYONIC DAY 13.5, ALSO EXPRESSED IN A RESTRICTED GROUP
CC OF NON-ENDOTHELIAL CELLS INCLUDING CHONDROCYTES AND RETINAL
CC NEURONS.

CC -1- DEVELOPMENTAL STAGE: EXPRESSED IN THE EMBRYO FROM DAY 7. AFTER DAY
CC 15.5, EXPRESSION DECREASES AND DISAPPEARS COMPLETELY BY THE TIME
CC OF BIRTH.
CC -1- SIMILARITY: CONTAINS 3 EGF-LIKE DOMAINS.
CC -1- SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.

CC -!- FUNCTION: INTEGRIN ALPHA-6/BETA-4 IS A RECEPTOR FOR LAMININ. IT
PLAYS A CRITICAL STRUCTURAL ROLE IN THE HEMIDESMOSOME OF
EPITHELIAL CELLS.

CC -!- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA SUBUNIT. BETA-4
ASSOCIATES WITH ALPHA-6.
CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC -!- DOMAIN: THE FIBRONECTIN TYPE III-LIKE DOMAINS BIND BPAG1 AND
PLECTIN AND PROBABLY ALSO RECRUIT BP230.
CC -!- SIMILARITY: BELONGS TO THE INTEGRIN BETA CHAIN FAMILY.
CC -!- SIMILARITY: CONTAINS 4 FIBRONECTIN TYPE III-LIKE DOMAINS.
CC -!- SIMILARITY: CONTAINS 1 VWFA-LIKE DOMAIN.

CC -!- FUNCTION: This protein has no beta-galactosidase catalytic
CC activity, but plays functional roles in the formation of
CC extracellular elastic fibers (elastogenesis) and in the
CC development of connective tissue. Seems to be identical to the
CC elastin-binding protein (EBP), a major component of the non-
CC integrin cell surface receptor expressed on fibroblasts, smooth
CC muscle cells, chondroblasts, leukocytes, and certain cancer cell
CC types. In elastin producing cells, associates with tropoelastin
CC intracellularly and functions as a recycling molecular chaperone
CC which facilitates the secretions of tropoelastin and its assembly
CC into elastic fibers.
CC -!- SUBCELLULAR LOCATION: Localized to the perinuclear area of the
CC cytoplasm but not to lysosomes.
CC -!- ALTERNATIVE PRODUCTS: 2 isoforms: 1/beta-galactosidase (AC P16278)
CC and 2 (shown here); are produced by alternative splicing.
CC -!- SIMILARITY: BELONGS TO FAMILY 35 OF GLYCOSYL HYDROLASES.

 CC -1- FUNCTION: Cleaves beta-linked terminal galactosyl residues from
 CC gangliosides, glycoproteins, and glycosaminoglycans.
 CC -1- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing beta-D-
 CC galactose residues in beta-D-galactosides.
 CC -1- SUBCELLULAR LOCATION: Lysosomal.
 CC -1- ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2/Beta-
 CC galactosidase-related protein (AC P16279); are produced by
 CC alternative splicing.
 CC -1- DISEASE: Defects in GLB1 are the cause of GMI-gangliosidosis, an
 CC autosomal recessive disorder with three major clinical phenotypes
 CC that are distinguished according to the age of onset and severity
 CC of symptoms: infantile (type I), juvenile (type II) and adult
 CC (type III). The infantile form is rapidly progressive and results
